Kapil Dewade

Member of Technical Staff · Software Architect · Identity, Cloud Platforms, and AI Agents

San Francisco Bay Area · kapildewade@gmail.com · codex0098.github.io · linkedin.com/in/kapil-dewade · github.com/codex0098 · medium.com/@kapildewade_52733

SUMMARY

Software engineer with more than 14 years of experience in software architecture, development, and cloud platforms, including more than 7 years of engineering management and technical leadership. Expertise in identity and access management (OAuth 2.0, OpenID Connect, SAML, SSO), multi-tenant architecture, distributed systems, REST APIs, data lakes and pipelines, Kubernetes, and AI agent and retrieval-augmented generation (RAG) systems.

EXPERIENCE

Member of Technical Staff · ID.me — Dec 2025 – Present

- Software engineering on identity and authentication platform services.

Associate Director, Engineering · Cornerstone OnDemand · Dublin, CA — Mar 2024 – Dec 2025

- Built three or more AI agents using open-source LLMs, RAG, vector search, LangGraph, LangChain, and Flask inference endpoints; user adoption and content creation on the platform increased by more than 30% over six months.
- Played a key role in EdCast's post-acquisition integration with Cornerstone, aligning platform strategy and execution.
- Led enterprise application design and architecture.

Senior Engineering Manager · EdCast / Cornerstone OnDemand · Mountain View, CA — Mar 2021 – Mar 2024

- Contributed to technical due diligence, product scalability, and engineering leadership during the company's acquisition by Cornerstone OnDemand in 2022.
- Designed and built a data lake and BI tool integrations from scratch (AWS Glue, PySpark, S3, Athena, Elasticsearch, DOMO), enabling 50% faster data processing for analytics and exposing data to headless applications.
- Implemented SSO and automated user and group management workflows with rule-based access controls.
- Integrated encryption and key management aligned with regulatory security requirements; built frameworks for data protection and user privacy.
- Led three groups across different product verticals; training developers raised team productivity by 30% with no attrition.

Engineering Manager · EdCast · Mountain View, CA — Mar 2018 – Mar 2021

- Moved backend infrastructure to container orchestration on hosted Kubernetes, AWS EKS, and GKE; led the team's adoption of Terraform.
- Led the migration of more than 10 applications and services from AWS to Google Cloud, including code changes for file storage, cloud functions, and platform-specific services.
- Developed SOC 2–compliant security controls for data integrity and confidentiality; scaled the core platform and architected core capabilities.

Senior Software Engineer · EdCast · Mountain View, CA — Jan 2016 – Mar 2018

- Joined as one of the early engineers; designed, architected, and implemented learning experience platform features.
- Improved system efficiency by more than 20% by migrating and optimizing more than 500 RESTful endpoints.
- Led the design and implementation of GDPR-compliant data processing.

Senior Software Engineer · Hyades Technology · Santa Clara, CA — Apr 2014 – Jan 2016

- Built Rails content management applications; improved system efficiency by 30% using Backbone MVC and REST APIs.
- Optimized Nook HD+ performance and re-architected the list management system that powered device content.

Software Engineer · Venturit · East Lansing, MI — May 2012 – Mar 2014

- Developed three or more Ruby on Rails web applications and three or more iOS applications.

WRITING, PATENT FILINGS, AND RECOGNITION

Bound Verifiable Presentation (BoundVP): Binding Wallet Presentations to Browser Sessions — with Kaustubh Khatri, Medium, Oct 2026. Experimental protocol proposal; design under evaluation, not peer-reviewed or standardized.

URL shortener system design series — four articles co-authored with Kaustubh Khatri, LinkedIn, Jul–Aug 2026 (replication, sharding, transactions).

Two provisional patent applications filed on AI agents and assurance (provisional filings, not issued patents).

ID.me Call of Duty Award, Oct 2026 — recognized for key contributions to ID.me projects.

SKILLS AND EDUCATION

Skills: Python, Ruby on Rails, Go, Flask, Django, LangChain, LangGraph, Kafka, Redis, Elasticsearch, time-series databases, SQL and NoSQL, PySpark, AWS, GCP, Kubernetes, Terraform, REST, design and architecture

Education: MS in Software Engineering, 2013
